Project Report Format

1. INTRODUCTION

1.1 Project Overview

The project focuses on developing an **automated ticket assignment system** to improve support operations. It eliminates manual intervention by routing tickets to the appropriate teams using predefined rules, roles, and workflows.

1.2 Purpose

The purpose of this project is to:

- Reduce delays in ticket handling
- Improve accuracy in ticket assignment
- Enhance customer satisfaction
- Increase operational efficiency

---

2. IDEATION PHASE

2.1 Problem Statement

Manual ticket assignment leads to delays, incorrect routing, and inefficiencies, resulting in poor user experience and increased workload for support teams.

2.2 Empathy Map Canvas

- **Users:** Customers & Support Team
- **Pain Points:** Delays, errors, workload
- **Needs:** Faster resolution, accurate routing
- **Feelings:** Frustration, dissatisfaction

2.3 Brainstorming

Ideas generated:

- Automated routing system
- Role-based access control
- Workflow automation
- Notification system
- Dashboard monitoring

Final idea selected: **Automated ticket assignment using roles and workflows**

---

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

1. User raises ticket
2. Ticket enters system
3. System assigns ticket automatically
4. Support team resolves issue
5. User receives updates and closure

3.2 Solution Requirement

Functional Requirements:

- User registration & login
- Ticket creation & tracking
- Automated ticket assignment
- Role & group management
- Notifications

Non-Functional Requirements:

- Security (RBAC, authentication)
- Performance (fast processing)
- Scalability (handle more users)
- Reliability (accurate routing)

3.3 Data Flow Diagram

- User → Ticket Creation → Database
- System → Classification → Routing Engine
- Ticket → Assigned to Support Team
- Status Updates → User

3.4 Technology Stack

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Node.js / Python
- **Platform:** ServiceNow
- **Database:** MySQL / ServiceNow Tables
- **Cloud:** Cloud-based deployment

---

4. PROJECT DESIGN

4.1 Problem Solution Fit

The solution directly addresses manual inefficiencies by automating ticket routing, ensuring faster and accurate issue resolution.

4.2 Proposed Solution

An automated system that:

- Assigns tickets based on rules
- Uses role-based access control
- Provides dashboards and notifications

4.3 Solution Architecture

- **Presentation Layer:** User interface
- **Application Layer:** Routing engine & workflows
- **Data Layer:** Ticket and user database

---

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology used
- Divided into 4 sprints
- Each sprint includes development, testing, and review
- Story points used for estimation

---

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

- System tested for multiple ticket requests
- Verified response time and accuracy
- Ensured system handles concurrent users efficiently

---

7. RESULTS

7.1 Output Screenshots

- User Registration Page
- Login Page
- Ticket Creation Form
- Dashboard View
- Ticket Assignment View

(Attach screenshots here in your document)

---

8. ADVANTAGES & DISADVANTAGES

Advantages

- Reduces manual effort
- Improves efficiency
- Faster ticket resolution
- Better customer satisfaction

Disadvantages

- Initial setup complexity
- Requires proper configuration of roles and workflows

---

9. CONCLUSION

The project successfully demonstrates an automated ticket assignment system that improves operational efficiency, reduces errors, and enhances user experience through intelligent workflow automation.

10. FUTURE SCOPE

- AI-based ticket classification
- Chatbot integration for support
- Advanced analytics dashboard
- Integration with external platforms

11. APPENDIX

- **Source Code:** (Attach or link)
- **Dataset Link:** Not applicable / optional
- **GitHub Link:** (Add your repository link)
- **Project Demo Link:** (Add demo video/link)
