Project Design Phase
Problem – Solution Fit Template

Date	15 February 2025
Team ID	SWTID-2026-6846
Project Name	Streamlining Ticket Assignment For Efficient Support Operations
Maximum Marks	2 Marks

Problem – Solution Fit

1. Customer Segment

- **Support Team Members (Ticket Handlers)**
- **End Users / Customers raising support requests**
- **System Administrators**

---

2. Problem (Customer Pain Points)

- **Manual ticket assignment leads to delays**
- **Tickets are often assigned to the wrong team**
- **Increased workload due to repeated reassignment**
- **Lack of visibility and accountability in ticket handling**
- **Slow response time affects customer satisfaction**

---

3. Existing Behavior

- **Support staff manually review and assign tickets**
- **Frequent follow-ups from customers**
- **Teams communicate internally to reassign tickets**
- **No standardized or automated routing process**

---

4. Impact of the Problem

- **Increased resolution time**
- **Reduced operational efficiency**
- **Frustration among support staff**
- **Poor customer experience and trust issues**

---

5. Proposed Solution

- **Automated ticket routing system based on predefined rules**
- **Role-based and group-based ticket assignment**
- **Workflow-driven ticket management**
- **Real-time notifications and status tracking**
- **Dashboard for monitoring and control**

---

6. Solution Benefits (Fit)

- **Eliminates manual errors in ticket assignment**
- **Reduces response and resolution time**
- **Improves efficiency and productivity of support teams**
- **Enhances customer satisfaction**
- **Ensures accountability through structured workflows**

---

7. Value Proposition

A smart and automated ticket assignment system that ensures right ticket → right team → right time, improving efficiency and user satisfaction.

---

8. Conclusion

The proposed solution directly addresses the core problems faced by both support teams and customers. By aligning automation with user needs, the system achieves a strong problem–solution fit, ensuring better adoption, improved performance, and scalable support operations.
